CHORTEK

BI for Sage 100 (and other data silos)

- **Extending Sage 100 Value**
- **Outgrowing Sage 100**

There are two kinds of reports that you need out of Sage 100

(and other data silos)

Process-Oriented Reports

They ensure that your established business processes (like shipping and invoicing) are being followed; they also provide you with critical audit trails of what has – and hasn't – been accomplished.

Examples: AR Aging, Stock Status, AP Check Register, Invoices Processed Today

They usually work with data around today's data.

Small data sets.

Target users: staff.

Sage 100 reports work well for process-oriented reporting.

Management-Oriented Reports

They give visibility into key performance indicators (KPIs) and use historical data to forecast future performance. They combine the details of what is happening in your business with the details of why it's happening.

Examples: High-Risk AR Debt, Inventory Projection, Salesrep Growth Analysis, Negative Cashflow Projection, Year-Over-Year Variance

They usually work with a lot more data than today's data.

Large data sets.

Target users: management.

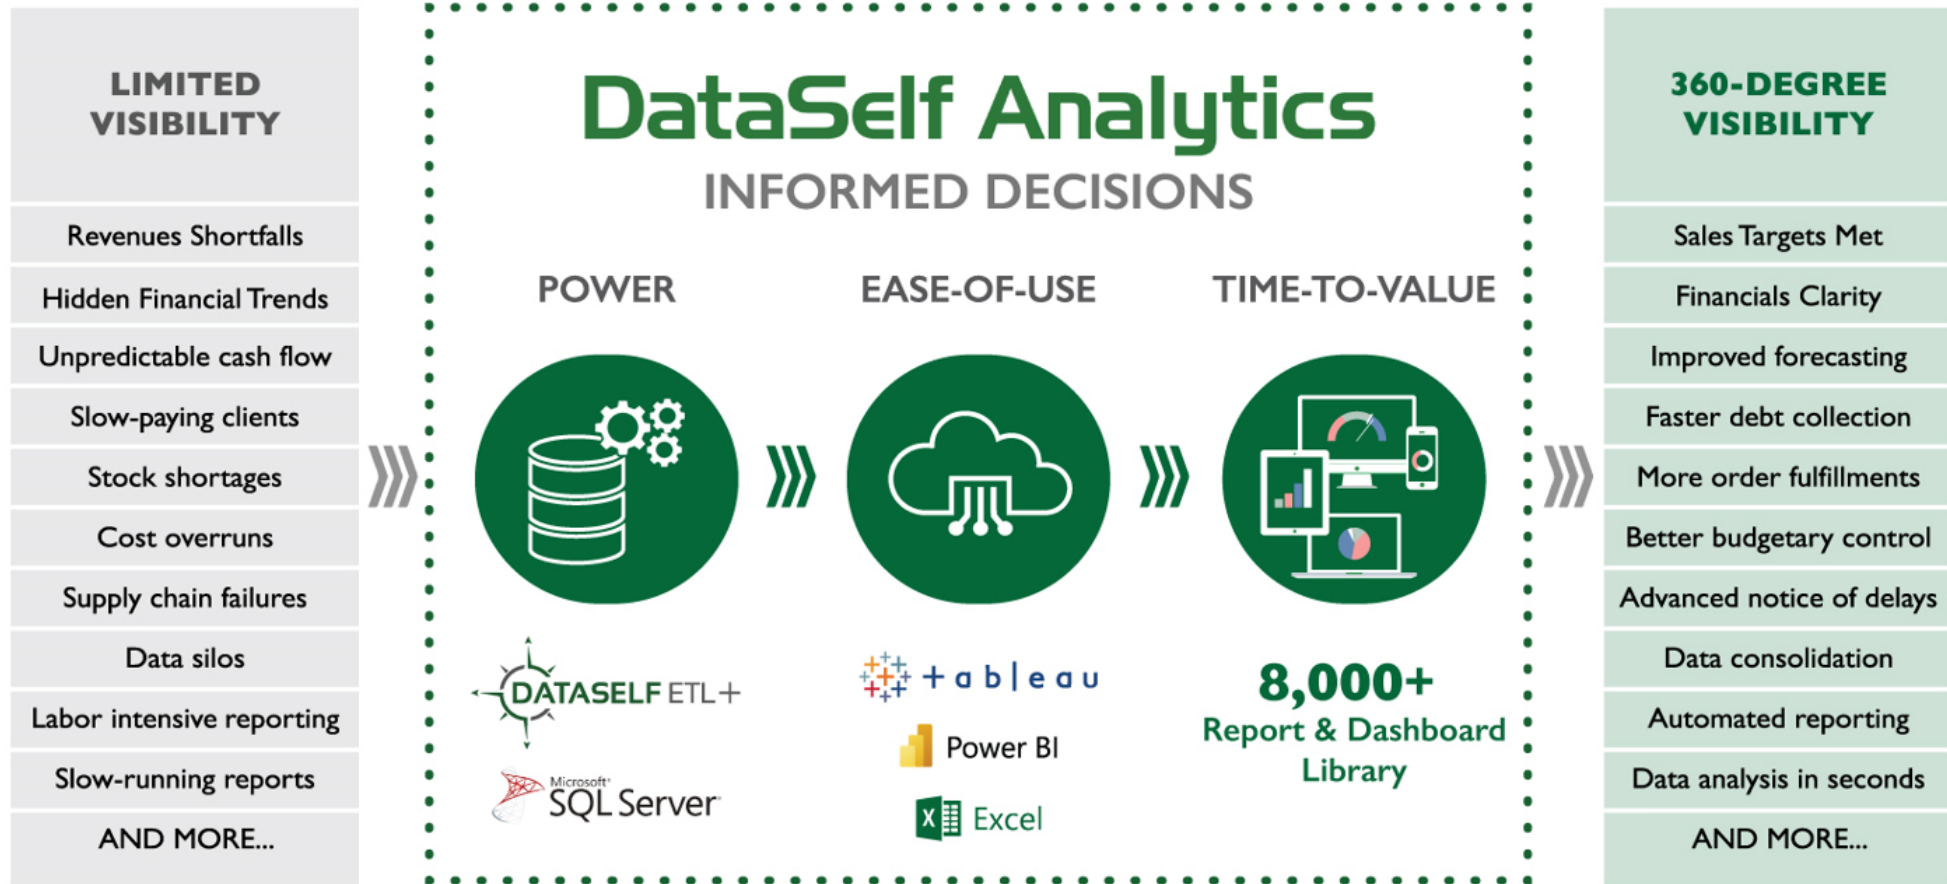

BI / Analytics is critical for management reporting.

Why are ERPs Reporting Tools limited for Management Reporting?

Technology of Analytics

	<u>Process-Oriented</u>	<u>Management-Oriented</u>
➤ Powerful data manipulation (data warehousing)	No	Yes
➤ Data retrieval in seconds	No	Yes
➤ Infinite drill-down	No	Yes
➤ Natural Language Query (Google-like search)	No	Yes
➤ ‘What-if’ reporting	No	Yes
➤ Predictive reporting	No	Yes
